Knowledge Transfer Tools

Polimeter

Since 2020, I have been working on the Quebec and Canadian Polimeters. This Web application (`polimeter.org`), updated every four months, allows citizens to consult the status of promises made by the Canadian, Quebec and Ontario governments. I have been project manager for the updates since 2021. In this capacity, I have not only

participated in research on the fulfillment of promises, but also played a coordinating, teaching and training role with a team made up of numerous research assistants. I also co-developed a new data infrastructure based on a Shiny application I created, contributed to the writing of the most recent bilingual methodological document, shared the Polimeter's results in media interviews and colloquia, and managed its social media pages.

Vitrine démocratique

I helped develop the website `https://vitrinedemocratique.com`, and in particular the Polimètre+ module, which uses AI to identify which campaign promises have been highlighted in the news, thereby providing a prominence-weighted showcase that allows people to discover the Polimètre.

Prof. Datagotchi vous répond

This chatbot (`https://prof-datagotchi.com`) allows users to access a summary of political parties' platforms at various levels of detail as part of the 2026 Quebec election campaign. I created and integrated press release extractors for the five major political parties in Quebec into this module, and I also clarified its methodology and how it works.

Quorum Project

Quorum Project (`quorumproject.com`) allowed Quebecers to follow the evolution of the tone of public decision-makers, the media and citizens in relation to COVID-19 from January to April 2021. I helped develop the algorithm for weighting citizen data to make it more representative of the Quebec population. I presented this algorithm at a Quantitative Methods Cluster workshop.

Radar+

I produced daily Twitter graphs on the salience of issues in the 2019 federal campaign using automated content analysis from media website data collected by the Radar+ data extractor, while participating in its development. I used Radar+ data to write analyses that were published in Policy Options, in the International Journal of Media & Cultural Politics and in the review book on the Legault government.
